This collection of information is required by 37 CFR 1.133. The information is required to obtain or retain a benefit by the public which is to file (and by the USPTO to process) an application. Confidentiality is governed by 35 U.S.C. 122 and 37 CFR 1.11 and 1.14. This collection is estimated to take 21 minutes to complete, including gathering, preparing, and submitting the completed application form to the USPTO. Time will vary depending upon the individual case. Any comments on the amount of time you require to complete this form and/or suggestions for reducing this burden, should be sent to the Chief Information Officer, U.S. Patent and Trademark Office, U.S. Department of Commerce, P.O. Box 1450, Alexandria, VA 22313-1450. DO NOT SEND FEES OR COMPLETED FORMS TO THIS ADDRESS. SEND TO: Commissioner for Patents, P.O. Box 1450, Alexandria, VA 22313-1450.

If you need assistance in completing the form, call 1-800-PTO-9199 and select option 2.

**Docket No.: 66329/31278****PATENT**

1. (Currently Amended) A system for remotely securing software updates of computer systems comprising:

a server adapted to receive software updates from a plurality of sources;

means adapted to receive installation scripts, each of which is associated with at least one software update disposed on the server;

a secured data storage adapted to store data representative of a plurality of remote data processing devices;

registration means, disposed in the server, adapted for receiving registration data from each of the plurality of remote data processing devices specific thereto, wherein registration data includes,

data corresponding to a secure data communication ~~path~~ session between the server and remote data processing device,

identification data corresponding to identification of installed software;

update parameter data corresponding to specified timing of software updates, and

data corresponding to selective manual and automatic installation of software updates;

authentication means adapted for receiving a login request from each remote data processing device including means adapted for comparing the received login request with the remote data processing device data;

means adapted for selectively placing the server in secure data communication with each requesting remote data processing device in accordance with a determination of the authentication means, wherein a secure data communication channel is established in accordance with registration data;

means adapted for testing updates received into the server against received registration data to determine each remote data processing device for which updates are appropriate; and

means adapted for selectively pushing software updates from the server, along with an associated installation script, in accordance with a received login request and in accordance with associated registration data.
